PROPOSED SYSTEM

The proposed system is a web-based Seamless Department Event Booking App designed to automate and simplify the process of managing departmental events. The system provides a centralized platform where users can easily access event information, register for events, and receive instant confirmation. It eliminates the need for manual registration methods and reduces the chances of errors and data mismanagement.

The application allows event organizers to create, update, and manage event details such as date, time, venue, and participant limits. It also enables real-time tracking of registrations, helping organizers monitor event capacity and participation effectively. Users can log in securely, browse available events, and book their slots with ease through a user-friendly interface.

The system includes database management to store user and event data securely, ensuring data integrity and easy retrieval. Additionally, it provides reporting features that help organizers analyze participation and generate useful insights.

Overall, the proposed system improves efficiency, reduces administrative workload, enhances user experience, and ensures a smooth and organized event management process.

PROPOSED SYSTEM ARCHITECTURE

- **Input:**
Users access the application through a web interface to enter login details, browse, and submit registration information events.
- **Processing:**
The system processes user requests through controllers and applies business logic such as user authentication, event creation, seat availability checking.
- **Database:**
All data is securely stored in a MySQL database, including user details, event information, and registration records, ensuring efficient data storage.
- **Output:**
The system displays results through web pages, including available event lists, successful booking confirmations.

WORKFLOW

Ticket Booking Web Application – Workflow Diagram
(Internal Department Event)

TECHNOLOGIES USED

- Frontend:**
 - React JS
 - HTML, CSS, JavaScript
- Backend:**
 - Node.js with Express.js
- Database:**
 - MySQL
- Tools:**
 - VS Code
 - MySQL Workbench
 - Git & GitHub
- Hardware/Software Requirements:**
 - Minimum 4GB RAM
 - Windows/Linux OS
 - Node.js & MySQL installed
 - Web browser
 - Internet connection

MODULE DESCRIPTION

- Module 1:**
Handles user registration, login, and authentication..
- Module 2:**
Displays events and allows users to book tickets.
- Module 3:**
Stores user data, event details, and bookings securely.
- Module 4:**
Generates reports on bookings and participant details.

IMPLEMENTATION SCREENSHOTS

Figure 1 : Home Page

The Figure 1 The home page serves as the main interface for users to access the system

ADVANTAGES & LIMITATIONS

ADVANTAGES

- Centralized platform for managing all events
- Reduces manual work and human errors
- Easy access to event details anytime
- Quick and simple registration process
- Instant booking confirmation
- Efficient tracking of participants
- Better event management and organization
- Saves time for users and organizers
- Improves communication
- User-friendly interface

LIMITATIONS

- Requires stable internet connection
- Initial setup needs technical knowledge
- Possible security risks if not properly managed
- May be difficult for non-technical users
- System failures can affect access
- Requires regular maintenance.

Thank you
